Looks like you're not using any error-checking in your Java build. This pull requests adds a static analysis tool, [Error Prone](#), created by Google to find common errors in Java code. For example, running `mvn compile` on the following code:

```
public boolean validate(String s) {
    return s == this.username;
}
```

would identify this error:

```
[ERROR] src/main/java/HelloWorld.java:[17,17] error: [StringEquality] String comparison
[ERROR]      (see https://errorprone.info/bugpattern/StringEquality)
```

```
88 88      </plugin>
89 + <plugin>
90 + <groupId>org.apache.maven.plugins</groupId>
91 + <artifactId>maven-compiler-plugin</artifactId>
92 + <version>3.5.1</version>
```

this pull request. Please feel free to add recommendation useful.

Vest commented on Feb 7, 2019

This PR failed automatic checks, I think it should be closed.

gastaldi commented on Jan 29, 2019

Thanks for the contribution, but given the number of errors, I think it would cause more harm than good ;)

bendem commented on Jan 28, 2019

Contributor 🙄 ...

This introduces a bunch of errors, can you check whether they are worth fixing or configure the plugin so as to ignore the false positives? <https://travis-ci.org/fizzed/rocker/jobs/485416635>
Also, you messed up the formatting of the pom.xml pretty bad.

yyuu commented on Jan 31

Owner 😊 ...

Umm. Your change itself looks good, but it seems CI's failing somehow 🙄 Will try digging it later...

<https://travis-ci.org/yyuu/jetty-nosql-memcached/builds/486048677>

gunnarmorling commented on Jan 31, 2019

Member 🙄 ...

Hey; I appreciate your efforts, but this change removes quite a lot of important things from the POM file. Can you remove this, please? ErrorProne itself is something I could see us adding, but can you comment on the overhead in terms of build time it adds? Thanks!

jjlauer commented on Jan 28, 2019

Member 😊 ...

This is the 3rd or 4th bot now in the last few months submitting a PR to promote certain tools.

All checks have failed

1 errored check

Peer Interactions

*Peer interactions
are effective!*

[Murphy-Hill, 2011]

[Brown, 2019]

BUT...

They are also the most infrequent mode of tool discovery!

[Murphy-Hill, 2011]

Opportunities for peer interactions are in decline:

- Remote Work 🧑‍💻
- Global Software Engineering 🌐
- Physical Isolation 🧑
- Lack of scalability 📈
- Mandated tools 🏢
- Learning curve 🕒
- Too many tools 🤖
- ...

Developer Recommendation Choice Architectures

DRCA	Tool [16]	Definition
Actionability	Technology and decision aids	Introducing technology to aid decision makers in choice tasks
	Use defaults	The way decision makers initially encounter choice tasks
Feedback	Reduce number of alternatives	Limiting the number of choice options presented to decision makers
	Focus on satisficing	Helping users consider outcomes that lead to higher choice satisfaction
	Attribute parsimony and labeling	Limiting the number of characteristics presented with options
	Translate and rescale for better evaluability	Presenting attributes to increase impact and clarity
	Customized information	Personalization to account for individual differences between decision-makers
Locality	Focus on experience	Considering the background and knowledge of decision-makers
	Limited time windows	Providing time restrictions for users to make decisions
	Partitioning of options	Groups or categories of options or attributes
	Decision staging	Dividing decisions into multiple stages

Actionability

Mhoye feedback

Strong opener has better opening

Break up decision-making into different slides (3)

- reading slides :/

- delivery

Not just what tools to recommend, how to get recommendations to land and stick

Get programmers to change code is hard, changing tools is harder

Tool finds to many errors

Get to email/PR sooner

* Can't see, can't hear, we have to talk about it!

* Problem with talking hackernews vs colleagues

Need to break this cycle (find people at this vulnerable moment)

People will understand data but connect with stories

decisions about how we make decisions and improve processes (nod towards nudge theory, debate about whether it will work [suspect])

amount of data hasn't proved itself (made it look like it would be an easy thing to fix, but it's not...)

Feedback 2

How to find and fix errors before they find us
common set of failure modes (common theme)
of tooling advocacy

All of these things work, people don't like them
and don't want to engage with (do things that
work but don't engage, work doesn't matter)

Nudge theory makes tool visible (show data to
make it immediately something to react to)
